

C-6 MODIFIED INDAZOLYLPYRROLOTRIAZINES**Abstract**

5 The present invention provides compounds of formula I

10 and pharmaceutically acceptable salts thereof.

 The formula I compounds inhibit tyrosine kinase activity of growth factor receptors such as HER1, HER2 and HER4 thereby making them useful as antiproliferative agents. The formula I compounds are also useful for the treatment of
15 other diseases associated with signal transduction pathways operating through growth factor receptors.
